DETAILED ACTION

Claim Objections

Claims 3-7 are objected to because of the following informalities:

- (1) in claim 3 the phrase "the formula (II)" lacks antecedent basis; the word "is" should be inserted between "nucleophile" and "of " to make the claim a complete sentence;
- (2) in claim 4 the phrase "of the formula (IIa) or (IIb)" lacks antecedent basis and "formula" should be corrected to "formulae"; the claim is not a complete sentence;
 - (3) claim 5 should be rewritten in Markush language;
 - (4) in claim 6 the phrase "the nucleophile (II)" lacks antecedent basis; and
 - (5) in claim 7, the phrase "the ratio" lacks antecedent basis.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 is indefinite because it is not clear what is meant by "if appropriate".

It is unclear if claim 6 should depend from claim 1 since there is no "nucleophile" (II) recited in the claim or if it should depend from claim 3 since the formula is recited in

Application/Control Number: 10/517,620

Art Unit: 1764

the claim. Also, the claim should be rewritten to clearly define that a" nucleophile or an inert organic solvent or a mixture thereof functions as a solvent".

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-7 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-1-11 and 15 of U.S. Patent No. 7,026,523 (hereinafter "Patent '523") in view of WO 92/10450 (hereinafter "WO '450"). Although the conflicting claims are not identical, they are not patentably distinct from each other because they are each directed to a process for telomerization of acyclic olefins comprising reacting acyclic olefins having at least two conjugated double bond

Application/Control Number: 10/517,620

Art Unit: 1764

with at least one nucleophile in the presence of a transition metal-carbene complex catalyst.

The difference between Patent '523 and the present application is that the patent is directed to a palladium-carbene complex catalyst whereas the present application calls for a broader metal-carbene complex catalyst, e.g., one or more metals of groups 8 to 10 of the Periodic Table of the Elements.

WO '450 discloses a process for producing 1-octene comprising telomerization of 1,3-butadiene in the presence of Group VIII transition metals and their complexes (see Abstract and page 6, line 21 to page 9, line 9).

However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have included the broader Group VIII transition metals because these Group VIII transition metals and their complexes are known to be effective telomerization catalyst as shown by WO '450 (see page 6, lines 21-30).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to In Suk Bullock whose telephone number is 571-272-5954. The examiner can normally be reached on Monday - Friday 6:00-2:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenn Caldarola can be reached on 571-272-1444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
